Philippine Information
Technology Organization

SEMINAR/WORKSHOP ATTENDED

1st Laguna IT Convention
"Technology trends:
Transformation"

- April 2013

Mozilla Asia L10n Workshop
in Taipei

- April 21-24, 2017

Bridge360 Point-Of-Sale System — Project Based- Web Dev.

- Description:
 - The goal of this system is to have a **default** specification for different gasoline stations without the need to create another system for another gasoline station.

Bridge360 CheckMySchool Web Admin(Revamped) — Project Based- Web Dev.

- Description:
 - CheckMySchool Web Admin is a web app designed to provide information for the CheckMySchool mobile app through the API endpoints(DRF), and acting as a back office application.
 - This project is supported by DepEd and will be part of the government effort to support and comply with their promise in the Open Government Project or OGP. Transparency and Accountability are two of the main thematic of OGP. Thus, CMS app would play a big role in the education sector regarding the two good governance principles.

Bridge360 CheckMySchool Web Admin(Revamped) — Project Based- Web Dev.

- Description:
 - CheckMySchool Web Admin is a web app designed to provide information for the CheckMySchool mobile app through the API endpoints(DRF), and acting as a back office application.
 - This project is supported by DepEd and will be part of the government effort to support and comply with their promise in the Open Government Project or OGP. Transparency and Accountability are two of the main thematic of OGP. Thus, CMS app would play a big role in the education sector regarding the two good governance principles.

Land Master web app — Project Based- Web Dev.

- Description:
 - Version 2.0 of GPG CRM project.
 - This project includes all the app of GPG CRM and additional features like the ff;
 - Automation for month to month expenses and salary of Staff and total calculation for remuneration of the Staff work done for a Client. Ticketing system(Job orders, Due diligence) inside with comment section and email notifications.

- I also manage technical support, maintenance, bug fixes, development and deployment.

PsalmsGlobal web app — *Project Based- Web Dev.*

- Description:
 - Version 1.0.0
 - This project solved the problem of the Call Center company of GPG. Clients can create their own Script for the Agents to use for each of their companies instead of adding a limited number of script lines. And each Script added to a certain call has an email notification sent to the Owner of the company.
 - The system also provides payroll/Time sheet entries for each Script used to a certain call which is automated(auto calculations for time sheets) by the system to lessen the human error, and is also real-time.
 - The system also has a Job Order for Clients or the Client's assistant to assign on a certain call with the Agent who created the call to do Due Diligence on the call that was created.
 - I also support, do maintenance, develop and deploy for this project – currently this project is on support mode and development mode
